TO: Dr. Lance Garrison,  
Protected Resources Branch

FROM: Dennis Lee,  
SEFSC Observer Coordinator

SUBJECT: Longline gear Incidental Take summary for quarter 3, 2004.

The Miami Laboratory Pelagic Observer Program (POP) is providing you with a summary report of the incidental take of marine mammals and sea birds that have been recorded by observers aboard longline vessels for July 1 to September 30, 2004. The POP completed an overall coverage rate of 7.3% of selected pelagic longline fleet for the quarter (Table 1). During the quarter, observers recorded three (3) marine mammals (1-common dolphin-alive; 1-Risso's dolphin-alive; 1-pilot whale-alive) and five (5) seabirds (4-greater shearwaters-dead and 1-greater shearwater-alive), in addition to 35 sea turtles (21-leatherbacks-alive; 14-loggerheads-alive).

Enclosed you will find the original Incidental Take (IT) forms and copies of the Haul logs for those animals associated with the regular longline coverage. The POP will maintain copies of the IT logs in our files until you have completed your data review or entry. I strongly recommend that you return the original IT forms with any changes (in red and initialed) to the POP staff when you have completed your review.

In addition to the POP reporting of Protected Resource (PR) species recorded during observed longline fishing, observers have been requested to inspect the turtle handling and dehooking gear available aboard the vessels as a requirement of the 2004 Biological Opinion (BO). Since you are the point-of-contact (POC) person overseeing the Miami BO tasking, I am providing you with copies of the Miami PR Turtle Gear check list forms either filled out by the observer or by POP staff during debriefing from 17 observed vessels. Although it is not clear how this information will be processed, the originals will remain on file in the observer office, room 314. The POP also has not provided the Turtle Take Estimates (TTE) nor the Net Mortality Ratio (NMR) mentioned in the 2004 BO as our program staffing does not have the expertise to conduct these analyses. Finally, the POP observers recorded no sawfish catches during the quarter; this species is not likely to occur in the pelagic environment.
